Art Unit: 3742

DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because it contains more than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-6, and 8-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art in view of Byers et al (US5443493).

Applicant's admitted prior art discloses an electrode system comprising a cochlear electrode array and positioner joined together near their distal ends wherein the positioner has an elongate flexible member with a lumen passing therethrough (specification, page 3, paragraph 9, line 1-page 5, line 4). Applicant does not disclose an insertion tool comprising a hand held tool

Application/Control Number: 10/635,768 Page 3

Art Unit: 3742

having a body and a barrel with the shape of a pen or a pencil, a protruding extendable and retractable stylet wire passing through the barrel, a slidable tab along one edge and connected to the stylet wire wherein a sliding movement causes the tab to extend the stylet wire in and out of the barrel, the lumen is threaded onto the stylet wire prior to insertion, a guiding tube to fit on the barrel, array includes an offset portion where lead attaches wherein guiding tube includes a slot along one edge to receive the offset portion, and the barrel includes a bend in order to facilitate guiding. Byers et al discloses a hand held tool having a body and a barrel with the shape of a pen or a pencil (Figures 4, 6), a protruding extendable and retractable stylet wire passing through the barrel (28), a slidable tab (32) along one edge and connected to the stylet wire wherein a sliding movement causes the tab to extend the stylet wire in and out of the barrel, the lumen is threaded onto the stylet wire prior to insertion, a guiding tube (26) to fit on the barrel, array includes an offset portion (column 3, lines 21-25) where lead attaches wherein guiding tube includes a slot (Figure 2) along one edge to receive the offset portion, and the barrel includes a bend (Figure 4) in order to facilitate guiding. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the insertion tool of Byers et al to insert Applicant's electrode system because, an insertion tool allows the distal tip portion carrying the fragile electrode to be safely guided into the cochlea.

Allowable Subject Matter

- 5. Claims 7, and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. Claims 15-16 are allowed.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawntina T. Fuqua whose telephone number is (703) 305-2581. The examiner can normally be reached on Monday-Friday 8-4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on (703) 305-5766. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
